PCI endorsement workflow

Key (colour coding): a repository PCI notification

Question - How are the relationships be stored?

They are added to the relationship metadata of the work (just the link, no additional information)

Manage Notify connections

This is only for admins to manage connections and view all incoming messages

Notify messages

Notification ID	Notification Type	Origin	Actor	Object
uuid	Announce - Endorsement Action	https://overlay-journal.com/system	Overlay Journal	<u>00001</u>

This data comes from the inbox and is essentially a log of the notifications.

List of most recent 1000 (or a chosen number)

Endorsements and reviews

[Endorsed by community A](#)

Badge

Related items

[Related Item](#)

When an endorsement is received, a relationship (link) to the endorsement is added to the work.

The owner of the work can remove the endorsement from their work, if desired

Check a request had not been previously submitted to the same service
